

New Disorder Readiness Scale (updated April 2020)

The NewSTEPS New Disorder Readiness Scale is intended to track progress toward full implementation of screening for a new disorder, as well as to provide data to NewSTEPS on how long the different phases and milestones of the implementation process take, and how these timelines vary by disorder, program and other variables.

Timing of activities and milestones achieved may differ by disorder. Therefore, we request that you complete a separate scale for each new disorder. If you are initiating implementation for more than one disorder, please complete a new scale for each. Here are some general notes for completing the tables:

- Phases 1, 2, and 4 represent implementation activities and Phase 3 represents education related activities.
- Your state may not need to conduct each activity/milestone listed. If the activity does not apply to your state, please check “not applicable” for that line.
- Start and completion dates are estimates. NewSTEPS would like to capture whether the activity takes three months or twelve months, and as such, exact dates are helpful, but not required. If you are unsure, please use the first of the month.
- If a required activity has not yet been initiated, please mark “not started.” If preparations for an activity have been initiated, please select “started” and enter the month and year preparation was initiated.
- Use the notes field to capture feedback or other information that is important to understanding the time required to complete a given activity.

For more information and instructions on how to complete the New Disorder Readiness Scale, including clarification about the activities/milestones included, please see the [New Disorder Readiness Scale Guide](#).
